PROFILE

Full Stack Web Developer with 5+ years of freelance experience building custom web applications, POS and inventory systems, and business platforms from scratch with PHP, JavaScript/TypeScript, React, Next.js, and Node.js. Hands-on builder of production AI agents and automation workflows: GPT-powered Messenger sales agents connected to live inventory data through n8n, webhooks, and custom JavaScript logic, with prompt engineering, hallucination fixes, and LLM cost optimization. Prefers clean, custom code over page builders, works independently, and debugs across the full stack. Eager to grow deeper into multi-agent systems and agentic frameworks.

EXPERIENCE

Software Engineer / Full Stack Developer
Freelance / Self-Employed
2021 – Present

Design, build, deploy, and maintain custom web applications and automation for small and medium-sized businesses.

- **AI Sales Agents (Adz Garage, Golden Rule Tires)** – Built and maintain GPT-powered Messenger agents that quote tires from a live multi-brand inventory. Wrote n8n JavaScript nodes for data normalization and filtering, engineered system prompts under strict size limits, fixed hallucinated pricing with guardrail rules, added follow-up automation, and benchmarked models to cut per-message cost.
- **ADZflow POS & Inventory (Next.js, Supabase)** – Live system for a 3-branch automotive business. Fixed slow navigation by replacing a fetch-all-rows loop with server-side pagination, caching, and code-splitting with React.lazy.
- **BuildPro** – Multi-project construction tracker (Next.js, Supabase/PostgreSQL) with BOQ-weighted progress and earned-value metrics (SPI, CPI, EAC).
- **Client Platforms** – POS and ordering systems (Ma. Jesusa General Merchandise, Richbean Jaen), live-selling automation (CFS Jewelry Shop), and an AI image generation platform with auth, subscriptions, and prompt optimization.

Technical Support Engineer
Terra Solar Philippines Inc.
Under Meralco MGEN
July 2025 – Present

- Diagnose and resolve hardware, software, network, and account issues for Windows and macOS users using NinjaOne, Quick Assist, and Microsoft Entra ID.
- Investigate root causes through log analysis and testing, and document fixes for the team.
- Built a conference room booking system for Meralco MGEN with scheduling, availability tracking, and reservations.

IT Intern / OJT
InfoPro Business Solutions Inc.
January 2025 – May 2025

- Developed responsive web applications (HTML, CSS, JavaScript) and Google Apps Script extensions that automated spreadsheet workflows.
- Built a self-quality assurance system for company laptops; provided IT support, including for Lopez Group board meetings.

EDUCATION

College — BSIT, Major in Web Development — Nueva Ecija University of Science and Technology — 2021 – 2025

SKILLS

Web Development	PHP, JavaScript, TypeScript, React, Next.js, Node.js, Express, HTML5, CSS3, Tailwind CSS, REST APIs, responsive & SEO-friendly builds
AI & Automation	OpenAI API, Claude, Groq, prompt engineering, AI agents & chatbots, n8n, Make, Zapier, webhooks, Google Apps Script
Databases	PostgreSQL / Supabase, MySQL, MongoDB, Firebase / Firestore, Redis
DevOps & Tools	Git & GitHub, GitHub Actions, Docker, Vercel, Cloudflare, Postman, Python & Bash scripting
Strengths	Full-stack debugging, performance optimization, working independently, clear communication with non-technical clients
